Transitioning to Integrated Financing of Priority Public Health Services in the Western Pacific

WHO Regional Office of the Western Pacific

UHC 2030 Technical Working Group

3 November 2017

Montreux, Switzerland
Overview

- Western Pacific regional context
- *Regional Framework for Action on Transitioning to Integrated Financing of Priority Public Health Services*
- Challenges and issues
- Key messages
Western Pacific Regional Context

- Changing health needs of the population
  - Progress in communicable and vaccine-preventable diseases
  - Emerging pandemics and natural disasters
  - Rise in non-communicable diseases
  - Accelerated aging process
- Economic growth and increasing expectations for quality health services
- Low government health spending and high out-of-pocket payments
- Reduced external funding for priority health programmes
- Need for flexible financing and more integrated service delivery
- Need for multisector approach, diverse needs for health services, risk factor control, and emergency response
Public and private health expenditure (2014)

Regional Framework for Action

Integrated and better coordinated service delivery and domestic financing systems

**Action 1**
Confirm core programme elements and service delivery arrangements

**Action 2**
Strengthen financing institutions to make better use of available resources

**Action 3**
Increase domestic financing

**Action 4**
Govern the transition process

Vertically funded priority public health programmes
Key challenges and issues

- Working across programmes and sectors
- Human resources – management and absorption of programme staff in the general health system
- Shift towards domestic financing – funding gap, alternative sources of financing, coordination of various health financing schemes
- Public financial management system – budgeting process, channeling of external financing, contracting non-state providers
- Procurement and supply management system
Key messages

- Securing of essential public health functions and core capacities through a whole-of-system approach
- Well-planned, phased implementation to transition
  - Mapping service delivery outlines and funding flows
  - Oversight mechanism
  - Monitoring progress and transition process
- Broader health sector and budgeting reforms
Thank you
Action 1 – Confirm core programme elements and service delivery arrangements

Core programme elements

- Policy guidelines and stewardship
- Programme monitoring and evaluation
- Prevention
- Diagnosis, treatment and care (clinical services)
- Surveillance
- Response
- Laboratory (clinical and reference laboratories)
- Procurement and supply management systems for public health commodities
- Community-based support
- Targeted approaches for vulnerable populations
Options for integration and better coordination of core programme elements

- e.g. Surveillance

*Please refer to the annex of the technical document for detailed discussion on future directions.*
Action 2 - Strengthen financing institutions to make better use of available resources

a. Prioritize and fund core programme elements
   i. Establish a transparent process in priority setting
   ii. Ensure access to quality health services by high-risk and disadvantaged populations
   iii. Address funding gaps and overlaps in transition

b. Align different funding sources and funding flows
   i. Absorb programme staff into the general health system
   ii. Channel external funding through the PFM system
   iii. Create flexibility in PFM systems for contracting NGOs
   iv. Set donor co-financing requirements to encourage more domestic resources
Action 2 - Strengthen financing institutions to make better use of available resources (continued)

c. Determine the role of health insurance in mixed health financing systems

i. Identify services and functions that can be potentially covered through health insurance

ii. Ensure effective coverage of appropriate benefit package for priority populations

iii. Subsidize health insurance for programme-related services with government funding
Action 3 – Increase domestic financing

a. Increase the government’s budget share to health
   i. Ensure active engagement between the health and finance authorities
   ii. Ensure effective implementation of the allocated budget
   iii. Develop comprehensive health sector plan and realistic performance indicators

b. Earmark additional revenues for health

c. Leverage resources from non-state actors for health

d. Pursue synergies across government sectors
Action 4 – Govern the transition process

a. Plan and implement in a phased manner
   – Set direction and long-term strategy, plan systematically and implement in a phased manner

b. Build consensus through transparent and participatory process
   – Improve transparency of financial information from both donors and national government and donor engagement
   – Involve the workforce and ensure participation of affected populations

c. Establish and maintain oversight and monitoring
   – Develop oversight mechanisms and monitoring processes
The Way Forward: Member States

1. Clearly define a set of essential public health functions for population health gains

2. Ensure adequate public funding from domestic sources for essential public health functions

3. Take a well-planned and phased approach to transition, including:
   – Ensuring the transition is well incorporated into the national health strategy and annual operational plan with clear budget indication;
   – Employing a whole-of-system approach to improve efficiency through integration and better coordination among programmes;
   – Building consensus and start with mapping core program elements with essential public health functions and assess health system capacity to deliver these functions; and
   – Monitoring progress and adjust policy accordingly
The Way Forward: WHO

1. Engage with global health initiatives and development partners to facilitate the process for countries going through transition:
   - Designing midterm funding plans and co-finance approaches to increase domestic funding and to change the operation mechanism of programmes for greater efficiency;
   - Working towards external funding that is channeled through existing domestic systems; and
   - Facilitating collaborations between programmes and ministries of health and finance, health insurance agencies, where applicable.

2. Facilitate country-level policy dialogue on priority settings and transition steps (road map) based on clear framework and robust evidence

3. Synthesize experiences and provide guidance for smooth transition according to each country’s specific context
